

ANDREI KUKALEU

SUMMARY

- 14 years of experience in designing, developing, quality assurance of wide range of solutions from embedded systems to cloud-native solutions.
- Specialized in .NET development leveraging Microsoft technology stack to build efficient and scalable back-end services.
- Proficient in designing cloud-based solutions using Azure services, ensuring robust, secure, and scalable architectures.
- Expanding into AI, focusing on conversational agents, LLM-driven automation, and cloud-integrated solutions to enhance SDLC and productivity.
- Committed to mentorship and learn programs, supporting people growth and best practice adoption.
- Proven leadership in managing cross-functional teams, fostering collaboration and delivering high-quality outcomes.
- Focused on process improvement, ensuring engineering excellence and adherence to standards.

CERTIFICATES

- Microsoft: Microsoft Certified: Azure AI Engineer Associate (AI-102), 2025
- Microsoft: Microsoft Certified: Azure Administrator Associate (AZ-104), 2025
- Microsoft: Microsoft Certified: Azure AI Fundamentals (AI-900), 2025
- EPAM: AI Literacy Program, 2024
- Microsoft: Microsoft Certified: Azure Developer Associate (AZ-204), 2024
- Microsoft: Microsoft Certified: Azure Fundamentals (AZ-900), 2024

SKILLS

Academic Disciplines

- **Applied Sciences:** Clean Code, MVVM Architecture pattern, Design patterns, Domain-Driven Design (DDD), Software Architectural Styles, SOLID (object-oriented design principles), Artificial intelligence, Microservice Architecture Style, Common security knowledge

Consulting Practice

- **Technology Consulting:** Cloud, Foundational & Emerging Technology

Engineering Practices

- **Advanced Technology:** IoT, Engineering Excellence, .NET Web Development, .NET ORM, Continuous Integration, Prompt Engineering, IoT testing, Code Review, Software Engineering Practices, .NET Back-end Development, Software Development Methodology in Engineering, .NET Asynchronous and Multithreading Programming, Generative AI Fundamentals, Gen AI Application Development, Software Design, Architecture Design, Software Engineering Knowledge & Experience, .NET, CI/CD, .NET Unit and Integration Testing, .NET Desktop development, Cloud Fundamentals, Troubleshooting, Estimation and Work Planning, Software Engineering Processes
- **Quality Engineering:** Embedded Software Testing, Test Automation Framework Architecture, Automated Testing in .NET, Unit Testing

Technologies

- **IDEs:** Github Copilot, Visual Studio
- **Frameworks:** WPF, xUnit, AutoMapper, xUnit.net, .NET API Development & Integration, WinForms, ReactJS, ASP.NET, ASP.NET Web API
- **Computer Languages:** Python, JavaScript, C#
- **Web/Application Servers:** .NET Framework
- **Large Language Models (LLM):** Retrieval-Augmented Generation (RAG)
- **Solutions:** Azure API Management, Git, Azure Repos, Azure Policy, Azure Log Analytics, Azure Pipelines, Microsoft Visio, Azure File Storage, Azure Advisor, Azure IoT Central, SciTech .NET Memory Profiler, Azure Active Directory Domain Services, Azure Information Protection, Microsoft Entra ID, Azure App Configuration, Azure AD Identity Protection, Azure CLI, Azure Event Grid, Azure Managed Identity, Azure Cost Management + Billing, Azure Container Registry
- **Platforms:** Azure Batch, IoT Cloud Platforms, Message Brokers (MQ), Microsoft 365 Copilot, Azure Service Bus, Azure Web Apps, Azure DevOps Services, Azure AI Search, Azure IoT Hub, Azure App Service Environment (ASE), .NET Technologies, Azure Event Hubs, Azure Cloud Shell, Azure Identity, Azure SignalR Service, Azure Application Gateway, Azure Monitor, Azure Key Vault, Azure App Service, Azure Functions, Azure DevOps, Azure Cosmos DB Core API, Microsoft Azure, Azure Container Instances
- **Data:** Azure Queue Storage, SQL, RabbitMQ, Entity Framework, Entity Framework Core, PostgreSQL, Azure Blob Storage, NoSQL Databases, Azure Application Insights, Document Databases, Azure SQL Database
- **Libraries:** Refit, SignalR
- **AI Assistants:** Microsoft Copilot
- **Standards:** Azure Virtual Machines, REST API

WORK EXPERIENCE

Oct-2025 - Feb-2026

Project Roles: Team Lead, Business Solution Architect, Key Engineer

Client: Wolters Kluwer

EPAM Project Description: AI product development team for WKL TAA iFirm product

Responsibilities:

- Led the design and implementation of AI prototypes such as document summarization, OCR, classification, and key-value extraction, integrated into target product through a custom MCP server and the client's AI agent platform.
- Built multi-agent orchestration workflows and vectorization/RAG pipelines for contextual document processing.
- Engineered OCR pipelines leveraging Azure Document Intelligence, Mistral, and token-based LLM extractors, while preparing multi-format test datasets.
- Integrated AI features into product UI application and Azure cloud components, including Functions, storage, and cognitive endpoints.
- Conducted system architecture analysis across target product, WK APIs, Azure, and customer AI platform; defined PoC scope, workflows, and a 2026 roadmap.
- Coordinated daily development activities, resolved blockers for engineers, and delivered demos, presentations, and stakeholder-ready materials.

Related experience

Project-1

Client Description: Global advisory and brokerage firm specializing in risk management, insurance, and consulting services.

Responsibilities:

- Designing, developing, and integrating services and REST APIs.
- Troubleshooting functional and non-functional issues to ensure system reliability.
- Conducted research and created proof-of-concepts (POCs).
- Addressed and resolved performance issues to optimize application efficiency.
- Engaged in documentation activities, including creating diagrams, WIKI pages, manuals, and guidelines.
- Collaborated directly with customer solution architects to translate their visions into technical solutions.

Project-2

Client Description: Global IT services and consulting company offering custom software development and digital transformation solutions.

Responsibilities:

- Conducted research on AI platforms, including Claude Code, Cursor, WindSurf, and GitHub Copilot, to evaluate their capabilities and applications.
- Investigated tooling such as LangChain/Graph, Semantic Kernel, and Prompt Flow for enhancing AI-driven workflows.
- Explored Azure AI capabilities and resources to identify potential integration opportunities within enterprise solutions.
- Researched challenges in .NET application migrations, developed migration roadmaps, and assessed AI role in optimizing various stages of the migration process.
- Analyzed the use of AI in addressing SDLC requests to improve efficiency and delivery.
- Model Context Protocol to address connectivity challenges between AI systems and external platforms.
- Designed and implemented multiple AI agent proofs of concept (POCs), including a Code Analyzer, migration of WinForms to WPF "as is" or with refactoring to MVVM, Retrieval-Augmented Generation (RAG) applications, and self-reflection mechanisms.

Project-3

Client Description: UK-based global asset manager providing investment solutions across various asset classes.

Responsibilities:

- Designed, developed, and supported microservices and REST APIs.
- Troubleshoot functional and non-functional issues to ensure system reliability.
- Contributed to architecture design for key system elements, including configuration, multitenancy, identity management, metrics collection, logging, and microservices software design.
- Conducted research and development to explore innovative solutions.
- Collaborated with cross-functional teams to address performance issues.
- Mentored less-experienced developers in cloud-native development practices.
- Provided technical consulting to the Practice Lead for decision-making and work coordination.
- Assisted Product Owners by clarifying technical details and task complexity for product implementation.
- Created and maintained technical documentation, including diagrams, WIKI pages, manuals, guidelines, and API documentation standards.
- Communicated directly with customer solution architects to translate their visions into actionable technical solutions.

EDUCATION

Name of the Education Establishment: BELARUSIAN STATE UNIVERSITY OF INFORMATICS AND RADIOELECTRONICS

Faculty/College: Computer Systems And Networks

Department: Information Technologies Software
