

SAYIDAHORR MIRZAAXMEDOV – SOFTWARE ENGINEER

SUMMARY

- Over 3 years of professional experience as a Full Stack Developer specializing in .NET Core, ASP.NET, React, and Azure.
- Expertise in designing and developing scalable cloud platforms, leveraging Azure Web Apps, Azure Functions, and Azure Service Bus for efficient deployment.
- Proficient in implementing CI/CD pipelines to enhance development and deployment workflows.
- Extensive database design and optimization experience with EF Core, SQL Server, PostgreSQL, and MongoDB.
- Strong frontend development skills in React, TypeScript, and Vite, delivering responsive and user-friendly interfaces.
- Backend proficiency in C#, REST APIs, and SignalR, enabling the creation of real-time, interactive applications.
- Developed AI-powered solutions, including custom AI agents using LangGraph, agent orchestration workflows, and MCP-based integrations.
- Built document intelligence pipelines for classification, OCR, and information extraction using Azure Document Intelligence and custom agents.
- Designed dynamic document summarization systems using indexing and RAG pipelines, enabling processing of large document collections.
- Integrated advanced AI technologies such as OpenAI GPT, Whisper, and Hugging Face to deliver intelligent and innovative software solutions.
- Demonstrated ability to collaborate effectively across engineering, research, and business teams, ensuring delivery of high-quality, business-aligned solutions.

CERTIFICATES

- Microsoft: Microsoft Certified: Azure Fundamentals (AZ-900), 2026

SKILLS

Engineering Practices

- **Digital Engagement:** User authentication and authorization
- **Data & Analytics:** MS SQL.SQL
- **Cloud:** Cloud, DevOps
- **Management:** Management
- **Advanced Technology:** APIs and Integration, Generative AI Fundamentals, .NET Back-end Development, CI/CD, .NET Web Development, Gen AI Assisted Development, .NET ORM, Debugging, RAG Applications Development, .NET Unit and Integration Testing, GitHub flow, Discovery conducting, .NET, .NET Asynchronous and Multithreading Programming, Gitflow
- **Quality Engineering:** AI Agents Testing

Leadership & Soft Skills

- **Communication:** Active listening, Confidence, Communication
- **Growth Mindset:** Stress tolerance, Adaptability
- **Ownership:** Time Management, Problem-solving, Self-Management

Managerial

- **General Management:** Scrum, Waterfall, Agile

Technologies

- **Platforms:** Azure AI Document Intelligence, Azure Container Instances, Azure Identity, Azure Web Apps, Azure Functions, Retrieval-Augmented Generation, Azure Developer Tools, Azure Service Bus, Microsoft Azure, Azure Networking, Azure Monitor, Azure Tools, Firebase, Azure App Service, Azure DevOps, .NET Technologies, Docker, Azure Management and Governance
- **Data:** MongoDB, Microsoft SQL Server, MySQL, NoSQL Databases, Azure Blob Storage, Azure Cosmos DB, Entity Framework, PostgreSQL, Azure SQL Database, Entity Framework Core, RabbitMQ, SQL, MongoDB Atlas, SQLite, Azure SQL, Microsoft Excel, SQL Databases
- **Agentic Workflows:** Agentic Workflows
- **Libraries:** SignalR, .NET HttpClient
- **Frameworks:** ASP.NET MVC, ASP.NET, Dapper, Transformers, LangGraph, .NET API Development & Integration, Hangfire, ReactJS, Angular, ASP.NET Identity
- **Computer Languages:** CSS, HTML, Python, TypeScript, JavaScript, C#
- **Web/Application Servers:** ADO.NET, Microsoft Internet Information Services
- **Large Language Models (LLM):** ChatGPT, Retrieval-Augmented Generation (RAG)
- **Solutions:** Azure Resource Manager, Azure Policy, GitHub, Ollama, Microsoft Entra ID, Azure Pipelines, Azure Advisor, Git, GitLab, Azure Kubernetes Service, Azure Blueprints, Microsoft Word, Microsoft Office, Azure Cost Management + Billing
- **Standards:** OpenID, REST API, WebSockets, Google Cloud APIs, OAuth2, Model Context Protocol

WORK EXPERIENCE

Project Roles: Engineer

Client Description: US division of company providing information services for legal, business, health, and regulatory sectors.

Responsibilities:

- Conducted research, prototyping, and validation of AI-driven automation to enable agentic workflows within the GenAI ecosystem.
- Analyzed existing product capabilities to identify opportunities for integrating AI agents and automation solutions.
- Designed and developed custom AI agents using LangGraph to support multi-step reasoning and tool-based workflows.
- Built and implemented agent orchestration pipelines and MCP servers to facilitate agent communication and seamless integration.
- Developed dynamic document summarization solutions using indexing and Retrieval-Augmented Generation (RAG) pipelines for processing large document collections.

- Created custom FAB agents for classification and OCR tasks, leveraging local FAB models and Azure Document Intelligence.
- Formulated and validated technical hypotheses on applying agentic workflows to enhance existing product offerings.
- Collaborated with business teams to evaluate experimental outcomes and provided technical insights and actionable recommendations.

Project-2

Project Roles: Full Stack Software Engineer

Client: Software development company with 20+ years of experience.

Responsibilities:

- Designed and developed a topic-based learning platform enabling users to select educational topics and receive real-time, AI-powered tutoring via voice or text.
- Integrated large language models (LLM) to generate structured, conversational explanations and feedback for enhanced user learning experiences.
- Implemented Whisper for real-time speech-to-text transcription, facilitating seamless voice interaction for users.
- Built a responsive and interactive frontend using React and Vite for an intuitive user interface.
- Developed backend services in .NET with WebSocket support to ensure low-latency communication and real-time responsiveness.
- Designed and developed a topic-based learning platform where users select educational topics and receive real-time, AI-powered tutoring through voice or text.

Project-3

Project Roles: Full Stack Software Engineer

Responsibilities:

- Implemented proficient CRUD operations and managed intricate data relationships, showcasing strong web development and database management expertise.
- Deployed and maintained multiple portals using Azure Web Apps, streamlining development and deployment processes through CI/CD pipeline implementation.
- Integrated ChatGPT API to enable AI-driven content generation, improving the quality and efficiency of educational material creation.
- Developed and optimized backend components and EF Core queries to enhance overall system performance.
- The platform features a flexible interface for both interns and curators, enabling efficient student progress tracking, scheduling, and access to educational materials.

EDUCATION

Name of the Education Establishment: WESTMINSTER INTERNATIONAL UNIVERSITY OF TASHKENT

Faculty/College: Computer Science
